EYE CONTACT: Contact with eyes can cause serious irritation with redness, tearing, and pain. Possible corneal damage.

INGESTION: Ingestion of small amounts (e.g., a teaspoon) are not likely to cause effects. Swallowing larger amounts may cause gastrointestinal symptoms.

REPRODUCTIVE/DEVELOPMENTAL: Animal ingestion studies in several species, at high doses, indicate that borates cause reproductive and developmental effects. A human study of occupational exposure to borate dust showed no adverse effect on reproduction. A recent epidemiological study and a peer reviewing report of past epidemiological studies conducted in China did not show any negative effect of boron on human fertility (1, 2).

CHRONIC: The effects of long term, low level exposures to this product have not been determined.
